About Me

- Having 2 years of experience in frontend development using React with Agile methodology and flexible to work with multiple team as a good team player. And very much passionate to learn new technologies to solve real-world problems..

Professional Experience

iGlitz Technologies | Software Engineer

Period : 5/4/2022 - Present

- Workflow Management is a tools to maintain the track of each and every action of the company in terms of Payment Orders, Purchase Orders, Procurement Orders, Work Orders, Procurement PO etc. User can create a workflow by assigning the specific form and specific user to each step, with the help of Workflow management.

Key responsibilities:

- Developed a fields lib, which generated forms with just passing json, reducing the development time and increasing the code reusability.
- Developed drag-and-drop dynamic form builders for each and every step of workflow, which improved the efficiency and flexibility of workflow management.
- Worked on workflow list and assignee page, which enabled users to assign specific roles and permissions to workflows directly, improving the workflow management experience.
- Developed User, Role, Permission management modules, Login, Signup and Authentication pages in Workflow management, which improved the security and user experience of the workflow management system.
- Did the base setup for the project with vite, routes, form-lib and navigations, which created a solid foundation for the workflow management system.

Technology used

- **React , Redux-Tool-Kit , React-Hook-Form, React beautiful dnd and Webpack**

- Dynamic CMS is a tool to design your own CMS, There will be admin portal, where user can create widgets, new pages and upload their logo, images for the CMS. And user can create and rearrange its homepage navigations by drag and drop the list from admin portal

Key responsibilities :

- When it comes to widgets, users can get creative. They can design widgets, like those with images or text, and choose different grid options to arrange them just the way they like, whether that's taking up the whole screen or fitting into smaller spaces.
- We give users the freedom to make their content truly their own. They can upload their logos, images, and add text to personalize their content management system (CMS). It's all about making it uniquely theirs
- Managing navigation is a breeze. We've designed an easy drag-and-drop interface, so users can rearrange their website's navigation items however they want. No more hassle - just a smooth and intuitive way to organize and structure their website.

Technology used

- **React, Redux-tool-kit, React-beautiful-dnd, Webpack, React-hook-form**
